3.1.1 Przepływy z wymaganiami

Szukamy przepływu $\leq F$ takiego, że $f_i \geq d_i$ dla każdej krawędzi. Tworzymy nowe źródło s' i ujście t'. Następnie dodajemy krawedzie

- $(u_i, t', d_i), (s', v_i, d_i), (u_i, v_i, c_i d_i)$ zamiast (u_i, v_i, c_i, d_i)
- (t,s,F)

Przepływ spełnia wymagania jeżeli maksymalnie wypełnia wszystkie krawedzie $s^\prime.$
